Lewis-Carl S., Kirley T.L.;

Immunolocalization of the ecto-ATPase and ecto-apyrase in chicken gizzard and stomach. Purification and N-terminal sequence of the stomach ecto-apyrase.";

J. Biol. Chem. 272:23645-23652(1997).

-! FUNCTION: In the nervous system, could hydrolyze ATP and other nucleotides to regulate purinergic neurotransmission. Could also be implicated in the prevention of platelet aggregation. Hydrolyzes ATP and ADP equally well (By similarity).

-! COFACTOR: Requires calcium and magnesium (By similarity).

-! SUBUNIT: Homodimer; disulfide-linked (Probable).

-! SUBCELULAR LOCATION: Integral membrane protein (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           EMBL; AF041355; AAC26491.1; -.

Treating stroke in a subject susceptible to intracranial hemorrhaging and an ischemic disorder, involves administering a CD39 polypeptide which inhibits ADP-mediated platelet aggregation or leukocyte accumulation.

Claim 3; Page 14; 118pp; English

The present sequence is the active fragment of human CD39. CD39 or its active fragment may be administered to treat or prevent stroke in a subject susceptible to intracranial haemorrhaging or an ischaemic disorder. The CD39 polypeptide inhibits ADP-mediated platelet aggregation or leukocyte accumulation and/or ATP by increasing ADP catabolism to the subject. CD39 or its active fragment is useful for treating or preventing stroke, thrombotic disorders and ischaemic disorders such as peripheral vascular disorder, pulmonary embolus, venous thrombosis, myocardial infarction, transient ischaemic attack, unstable angina, reversible ischaemic neurological deficit and sickle cell anaemia. It is also useful for treating or preventing a stroke disorder in a subject undergoing heart surgery, lung surgery, spinal surgery, brain surgery, vascular surgery, abdominal surgery, or organ transplantation surgery

.454

Protein

WO200023459-A1

27-APR-2000

```
The present sequence is the protein enocoded by a fusion construct of sol (soluble) CD39 having apyrase activity. Fusion of 12 amino acids from the N-terminus of mature human IL2 to the solCD39 coding region results in high levels of mature human IL2 to the solCD39 coding region results transfected cells. This is used in the treatment of unstable angina, mycosrdial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemia, chrombocic disorder including coronary artery thrombosis, cerebral artery thrombosis, intracardiac thrombosis, peripheral artery thrombosis, thrombosis, thrombosis, coggulopathy, deep venous thrombosis (DVT), pulmonary embolism (PB),
                                                                                                                                                                                                                                                                 unstable angina, myocardiaî infarction, stroke, coronary artery disease, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemic disorder, lung ischaemia, thrombolytic; cerebral ischaemia, thrombotic disorder, coronary artery thrombosis, cerebral artery thrombosis, intracardiac thrombosis, venous thrombosis,
                                                                                                                                                                                                                                                                                                                                                       peripheral artery thrombosis; coagulopathy; deep venous thrombosis; DVT; PB; pulmonary embolism; transient ischaemic attack; thrombus formation; occlusion; reocclusion; stenotsis; restenosis; antianginal; cardiant; cerebroprotective; antiarteriosclerotic; vasotropic; anticoagulant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            mammal suffering from unstable angina, myocardial infarction, stroke, coronary artery disease or injury, comprises administering soluble CD39 polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Inhibiting platelet activation and recruitment, useful for treating a

This construct comprises of the leader peptide from human immunoglobulin Is deappa, linked to the soluble CD39 (solCD39) protein region by few residues derived from human interleukin 2 (hILD.) SolCD39 has apyrase activity and is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting anyocardial infarction, coronary artery disease or injury, embolism, atherosclerosis, peripheral vascular occlusion, preeclampsia, platelet associated ischemic disorders including lung, coronary and cerebral ischaemic disorders including coronary, peripheral and cerebral artery thrombotic disorders including coronary, peripheral and cerebral artery thrombotic disorders including coronary embolism (PE) coagulopathy, deep venous thrombosis (DVT), pulmonary embolism (PE) and transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, recoclusion, stenosis or restenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     202
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    265

ö
This is used for transient expression of soluble(sol)CD39 in recombinant cells for determining enzymatic activity and platelet inhibitory activity for each protein product. SolCD39 is used in the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemic disorder including lung ischaemia, coronary ischaemia and creebral ischaemia, thrombosic disorder including coronary artery thrombosis, exerbra artery thrombosis, intracardiac thrombosis, peripheral artery thrombosis, venous thrombosis, thrombosis, coagulopathy, deep venous thrombosis (DVT), pulmonary embolism (PE), transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, recoclusion, stenosis or restenosis or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180

The present sequence is the fusion protein construct, pILZITriml. This construct comprises of the leader peptide from human interleukin 2 (hILZ) and soluble CD39 (soltcher) region, having apprase activity. The two regions are joined by an intervening Ala residue. Soluble CD39 is constructed by removing the N. and C-terminal transmembrane domains. It cretains the capacity to metabolise ATP and ADP at relavant concentrations and the ability to block and reverse ADP-induced platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptides or enseful for inhibiting anglogenesis. It is useful for the treatment of unstable angina, atroke, myocardial infarction, coronary artery disease or injury, embolism, atherosclerosis, peripheral vascular occlusion, coronary and cerebral ischaemia, thrombotic disorders including lung, coronary and cerebral actery thrombotic disorders including coronary, pereclampsia, platelet-associated ischaemic disorders including coronary, coronary and cerebral artery thrombosis, intracardiac and venous thrombosis, coagulopathy, deep venous thrombosis (DVT), pulmonary embolism (PE) and transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion, stenosis or restenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       87 NEIGIYLTDCMERAREVIPRSQHQETPVYLGATAGMRLLRMESEELADRVLDVVERSLSN

fusion construct. Fusion of 12 amino acids from the N-terminus of mature human IL2 to the solCD39 coding region results in high levels of both syrpession and activity in the supernatants of transfected cells. SolCD39 is used in the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemic disorder including lung ischaemia, coronary ischaemia and cerebral ischaemia, a thrombosic disorder including coronary artery thrombosis, cerebral artery thrombosis, intracardiac thrombosis, peripheral artery thrombosis, thrombosis, coapulopathy, deep venous thrombosis, thrombosis, coapulopathy, deep venous shrombosis (PE), transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or restenosis of blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Soluble CD39, solCD39, human, apyrase activity; platelet activation; unstable angina; myocardial infarction; stroke; coronary artery disease; atherosclerosis; peripheral vascular occlusion; preeclampsia; embolism; platelet-associated ischaemic disorder; thrombotic disorder; reocclusion; coagulopathy; deep venous thrombosis; DVT; pulmonary embolism; PE; thrombus formation; occlusion; restenosis; angiogenesis; antianginal; cerebroprotective; antiateriosclerotic; anticoagulant; cardiant; vasotropic; thrombolytic; inhibitor; interleukin 2; IL2.

This construct comprises of the leader peptide from human interleukin 2 (hIL2) and soluble (D13) (solCD39) protein region, having apyrase activity.

Soluble CD39 (solCD39) protein region, having apyrase activity.

Soluble CD39 is constructed by removing the N- and C-terminal transmembrande domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-

CC induced platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting angiogenesis. It is useful for the treatment of unstable angina, stroke, myocardial infarction, coronary artery disease or injury, embolism, comparting platelet-associated ischaemia disorders including lung, coronary and cerebral ischaemia, thrombotic disorders including coronary, peripheral and cerebral artery thrombosis, intracardiac and venous thrombosis, intracardiac and venous thrombosis, capacing thrombosis, intracardiac and venous thrombosis, contacting cransient ischaemic attack. Soluble CD39 is also useful for preventing coronary are proposis or reformation, occlusion, reocclusion, stenosis or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                36
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               96
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             121
                                                                                                       Peptide
                                                                                                                                                                                                                 Protein
```

```
Inhibiting platelet activation and recruitment, useful for treating a mammal suffering from unstable angina, myocardial infarction, stroke, coronary artery disease or injury, comprises administering soluble CD39 polypeptides.

```
The present sequence is the protein encoded by Trim4 construct. pIL2Trim4 variant was constructed by removing the human IL2 residues from solCD39 fusion construct. Fusion of IL2 amino acids from the Neterniums of mature human IL2 to the solCD39 coding region results in high levels of both expression and activity in the supernatants of transfected cells. SolCD39 is used in the treatment of unstable angina, myocardial infarction, cstroke, coronary artery disease or injury, atterosclerosis, peripheral vascular occlusion, precidampsia, embolism, platelet-associated ischaemic disorder including lung ischaemia, coronary ischaemia and cerebral ischaemia, a thrombotic disorder including coronary artery thrombosis, cerebral artery thrombosis, intracardiac thrombosis, peripheral artery thrombosis, venous thrombosis, intracardiac thrombosis, peripheral artery thrombosis (DVT), pulmonary embolism (PE), transient ischaemic attack. Soluble CD39 is also useful for preventing thrombosis of matching the preventing thrombosis of matching the preventing thrombosis of matching the preventing thrombosis of matching the preventing thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching thrombosis of matching
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Soluble CD39; solCD39; human; apyrase activity; platelet activation; unstable angina; myocardial infarction; stroke; coronary artery disease; atherosclerosis; peripheral vascular occlusion; preclampsia; embolism; platelet-associated ischaemic disorder; thrombotic disorder; reocclusion; coagulopathy; deep venous thrombosis; DVT; pulmonary embolism; PE; thrombus formation; occlusion; stenosis; restenosis; anglogenesis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

The present sequence is the fusion protein construct, pIL2LTrim3. This construct comprises of the leader peptide from human interleukin 2 (hIL2) and soluble CD39 (solUD39) protein region, having apprase activity.

CC Soluble CD39 is constructed by removing the N- and C-terminal constructations and the ability to metabolise ATP and ADP transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP.

CC induced platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting aggregation. Soluble CD39 polypeptides are useful for inhibiting aggregation. Soluble CD39 polypeptides are useful for inhibiting aggregation, pertipheral arcany disease or injury, embolism, and carebral archaemic disorders including long, coronary and cerebral associated ischaemic disorders including coronary, peripheral and cerebral artery thrombosis, intracardiac and venous thrombosis, capaulopathy, deep venous thrombosis, intracardiac and venous thrombosis, crassient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion, stenosis or trestenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 NEIGIYLTDCWERAREVIPRSQHQETPVYLGATAGWRLLRMESEBLADRVLDVVERSLSN 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           YPFDFQGARIITGQEEGAYGWITINYLLGKFSQKTRWFSIVPYETNNQETFGALDLGGAS 180

The present sequence is the protein encoded by Trim3 construct. pIL2Trim3 variant was constructed by removing the human IL2 residues from solCD39 (Tusion construct. Pusion of 12 amino acids from the N-terminus of mature human IL2 to the solCD39 coding region results in high levels of both expression and activity in the supernatants of transfected cells. SolCD39 is used in the treatment of unstable angina, myocardial infarction, carocke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemic disorder including lung ischaemia, coronary ischaemia and cerebral ischaemia, a thrombosis, intracardiac thrombosis, peripheral artery thrombosis, cerebral artery thrombosis, intracardiac thrombosis, peripheral artery thrombosis, thrombosis, cosqulopathy, deep venous thrombosis, thrombosis, cosqulopathy, deep venous thrombosis (DVT), pulnonary embolism (PS), transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion, stenosis or restenosis of blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    216
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      336

CD39-L4 is a secreted apyrase, belonging to the CD39 family. Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and recruitment, including platelet aggraphion. Soluble CD39 polypeptides are useful for inhibiting angiogenesis. It is useful for the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atheoreacherosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemic disorders including lung, coronary and cerebral ischaemia, thrombotic disorders including coronary, coronary and cerebral artery thrombosis, intracardiac and venous thrombosis, coagulopathy, deep venous thrombosis (DVT), pulmonary embolism (PB) and transient ischaemic attack. Soluble CD39 is also useful considered in the process of the preventing thrombus formation or reformation, occlusion, reocclusion,

CC Py CD39-L4-1 construct.

CC Dy CD39-L4-1 construct.

CC Dy CD39-L4-1 construct.

CC Seluble CD39 in CHO (chinese hamster ovary) cells. Soluble CD39

CC Fetains the capacity of wildtype CD39 to metabolise ATP and ADP at

CC CA soluble CD39 in CHO (chinese hamster ovary) cells. Soluble CD39

CC Fetains the capacity of wildtype CD39 to metabolise ATP and ADP at

CC and reverse ADP-induced platelet activation and recruitment including

CC and reverse ADP-induced platelet activation and recruitment including

CC platelet aggregation. This is used in the treatment of unstable angina,

CC platelet aggregation. This is used in the treatment of unstable angina,

CC atheroscleropsis, peripheral vascular occlusion, preeclampsia, embolism,

CC attery thrombosis, cerebral ischaemia, thrombosis, incracardiac thrombosis,

CC cagulopathy, deep venous thrombosis, thrombosis,

CC cagulopathy, deep venous thrombosis, thrombosis,

CC cagulopathy, deep venous thrombosis, thrombosis,

CC cagulopathy, deep venous thrombosis, thrombosis,

CC transient ischaemic attack. Soluble CD39 is also useful for preventing

CC transient ischaemic attack. Soluble CD39 is also useful for preventing

CC restenosis of blood vessels or stroke

The present sequence is protein encoded by the coding region of pil2SolCD39, a fusion construct encoding sol(soluble)CD39 having apyrase pil2SolCD39, a fusion construct encoding sol(soluble)CD39 having apyrase activity. Fusion of 12 amino acids from the N-terminus of mature human CC clil2 to the solCD39 coding region results in high levels of both caxpression and activity in the supernatants of transfected cells. This is coronary artery disease or injury, atherosclerosis, peripheral vascular corolusion, preeclampsia, embolism, platelet-associated ischaemic disorder including lung ischaemia, coronary ischaemia and cerebral ischaemia, coronary ischaemia and cerebral ischaemia attrophromobosis, intracardiac thrombosis, peripheral artery thrombosis, thrombosis, coagulopathy, deep venous thrombosis, venous thrombosis, coagulopathy, deep venous thrombosis (DVT).

Thrombosis, preventing thrombosis ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           160

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

guanosine-diphosphatase (EC 3.6.1.42) - yeast (Saccharomyces cerevisiae)
N;Alternate names: protein YEL042w
N;Alternate names: protein YEL042w
C;Species: Saccharomyces cerevisiae
C;Species: Saccharomyces cerevisiae
C;Date: 21-8pp-1993 #sequence revision 18-Nov-1994 #text_change 09-Jul-2004
C;Accession: A40732; B40732; S30837; S50502
B;Abeijon, C; Yanagiaewa, K; Mandon, B.C.; Hausler, A.; Moremen, K.; Hirschberg, C.B.; J. Cell Biol. 122, 307-323, 1993
A;Title: Guanosine diphosphatase is required for protein and sphingolipid glycosylation
A;Reference number: A40732; MUID:99308137; PMID:8991537 A; Molecule type: DNA A; Residues: 1-518 <ABE> A; Accession: A40732

Bubmitted to the EMBL Data Library, December 1994
A;Description: The sequence of S. cerevisiae cosmids 8199, 8334, and 9871.
A;Reference number: S50491
A;Reference number: S50402
A;Reference 150502

MISCELLANEOUS: Optimal pH is 7.0-7.5 with ATP as substrate and 7.5-8.0 with ADP.

SIMILARITY: Belongs to the GDA1 / CD39 NTPase family.
